

STATE OF NEVADA }  
COUNTY OF WASHOE }

ss. \_\_\_\_\_  
File No. \_\_\_\_\_

ROBERT L. REDMOND, first being duly sworn, deposes and says:

I am familiar with those contiguous mining claims situate in the Fourmile Canyon Area, Cortes Range, Cortes Mining District, Eureka County, Nevada, known and designated as the Falcon, Falck Nos. 1 through 13, 16, Falcon Nos. 19 through 44, Ina Nos. 1 through 4, Pat Nos. 1 through 79, and do make this affidavit on behalf of Martel Mining Company, the owner thereof.

For and with respect to the assessment year September 1, 1964, to September 1, 1965, there was performed or made on, or for the benefit of each of the said claims, at least \$100.00 worth of labor, said work having a total value in excess of \$12,400.00. Such work was done during the period from September 3, 1964 through August 23, 1965.

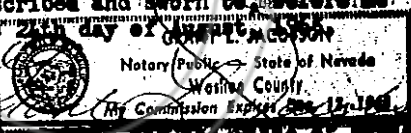

Such work performed and improvements made included the following: Geological, geochemical and geophysical work in September 1964 and from May 1 through August 23, 1965. This work consisted of Induced Polarisation surveys in the Fourmile Canyon on the Ina, Falcon and Pat claim groups; geochemical sampling on the Ina, Falcon and Pat Claim groups for copper, molybdenum mineralization; mapping and geochemical sampling on the Ina, Falcon and Pat Claim groups for copper, lead and zinc mineralization; geochemical sampling on the Sugarleaf-Willow Creek-Horse Canyon area covered by the Pat Claims, for mercury halo surveys; detailed mapping of the geologic structure in the Fourmile-Sugarleaf-Hill Canyon areas to delineate the vein and fault patterns; further petrological studies covering all claim groups.

The basic findings from such work included: (1) An Induced Polarisation anomaly in the Mely Spring area appears to be near surface and in the same general area as the Self-Potential anomaly reported in 1964. (2) Confirmation of hydro-geochemical anomaly for molybdenum in Fourmile Canyon. (3) Mercury was found to be anomalous on the southern slope of Sugarleaf towards the Rossi property. (4) Further mapping of geologic structure in Fourmile Canyon indicates a strong N20W shear zone that may account for part of the Magnetic anomalies and part of the mineralization.

Such work and improvements were performed or made at the instance of and for the benefit of and at the expense of MARTEL MINING COMPANY, pursuant to its contractual obligations with respect to such claims. Such work was performed under the general supervision of ROBERT L. REDMOND, geologist, assisted by EDMOND F. LAWRENCE, E.L. STEPHENSON, HELEN K. LAWRENCE, AND OTHERS. Edmond F. Lawrence is a Consultant Mining Geologist, and E.L. Stephenson is a Consultant Geophysicist and geologist. The above geological, geochemical, and geophysical work was not repetitive of previous surveys.

Robert L. Redmond is a graduate geologist with 15 years experience in exploration and development of mining properties and is the General Manager of Martel Mining Company.

Subscribed and sworn to before me this 24th day of August, 1965

File No. 11202

RECORDED AT THE REQUEST OF  
ROBERT L. REDMOND, first claimant, who has deposited and says:  
Robert L. Redmond

I am familiar with the location of claims situated in the  
Fountain Canyon Area, Carson Range, Carson Mining District, Washoe County,  
Nevada, known and designated as the "Fountain Canyon" Pat Nos. 1 through 13, 16,  
17, 18, 19 through 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40,  
and do make this affidavit on behalf of the owner, the owner  
of the records of

**WASHOE COUNTY, NEVADA**

For and with respect to the assessment year September 1, 1965, to  
September 1, 1966, there were no claims, or for the benefit of  
each of the said claims, a total value in excess of \$12,000.00. Such work was done during the period  
from September 3, 1964 through August 23, 1965.

Such work performed and improvements made included the following:  
Geological, geochemical and geophysical work in September 1964 and from  
May 1 through August 23, 1965. This work consisted of induced polarization  
surveys in the Fountain Canyon on the Las, Falcon and Pat claim groups;  
geochemical sampling on the Las, Falcon and Pat claim groups for copper,  
polymetallic mineralization; mapping and geochemical sampling on the Las,  
Falcon and Pat claim groups for copper, lead and zinc mineralization;  
geochemical sampling on the Sugarloaf-Willow Creek-Horse Canyon area  
covered by the Pat Claims, for mercury halo surveys; detailed mapping  
of the geologic structure in the Fountain-Sugarloaf-Hill Canyon areas  
to delineate the vein and fault patterns; further petrological studies  
covering all claim groups.

The basic findings from such work included: (1) An induced polariza-  
tion anomaly in the Melt Spring area appears to be near surface and in  
the same general area as the Self-Potential anomaly reported in 1964.  
(2) Confirmation of hydro-geochemical anomaly for molybdenum in Fountain  
Canyon. (3) Mercury was found to be anomalous on the southern slope  
of Sugarloaf towards the Royal property. (4) Further mapping of geologic  
structure in Fountain Canyon indicates a strong N15W shear zone that may  
account for part of the magnetic anomalies and part of the mineralization.

Such work and improvements were performed or made at the instance of  
and for the benefit of and at the expense of MARTEL MINING COMPANY, pursuant  
to its contractual obligations with respect to such claims. Such work was  
performed under the general supervision of ROBERT L. REDMOND, Geologist,  
assisted by RIMOND F. LAWRENCE, E.L. STEPHENSON, HELEN K. LAWRENCE, AND OTHERS.  
Rimond F. Lawrence is a Consultant Mining Geologist, and E.L. Stephenson is  
a Consultant Geophysicist and Geologist. The above geological, geochemical,  
and geophysical work was not repetitive of previous surveys.

Robert L. Redmond is a graduate geologist with 15 years experience  
in exploration and development of mining properties and is the General  
Manager of Martel Mining Company.
