Most samples were analyzed for gold by atomic absorption spectrophotometry by Rocky Mountain Geochemical Corporation, Salt Lake City, or Skyline Labs, Inc., Denver. Some of the samples were analyzed by colorimetric methods for cold extractible heavy metals. The geological and geochemical survey, consisting of both grid and detailed sampling, showed anomalies in gold, silver, copper, lead, and zinc. The survey was conducted by Lyle F. Campbell, Box 7377, Reno, Nevada, a B.S., Mining Engineering graduate of the University of Minnesota, and a graduate of the Colorado School of Mines short course in geochemistry who has been practicing his profession for 19 years.

That all expenditures were made at the expense of Lyle F. Campbell for the purpose of complying with the laws of the State of Nevada and the United States in the performance of annual assessment work to maintain title to unpatented lode mining claims; that said work was done by or for and on behalf and for the benefit of Lyle F. Campbell, owner of the unpatented lode mining claims above named.
