

AFFIDAVIT OF ANNUAL ASSESSMENT WORK
For Unpatented Mining Claims

STATE OF COLORADO)
) SS.
COUNTY OF MESA)

TO WHOM IT MAY CONCERN:

Please take notice that W. L. Wilson, being first duly sworn, says that there was expended more than \$1,000.00 in labor and improvements, as the annual assessment work for the year ending September 1, 1971, on the following contiguous unpatented lode mining claims:

Claim Name	Location Certificate Recorded	
	Book	Pages
W-1	26, Official Records	101-102
W-2	26, " "	103-104
W-3	26, " "	105-106
W-4	26, " "	107-108
W-5	26, " "	109-110
W-7	26, " "	111-112
W-8	26, " "	113-114
W-12	26, " "	115-116
W-13	26, " "	117-118
W-17	26, " "	119-120

all situate in the Eureka Mining District, Eureka County, Nevada. Said work was done for the purpose of holding said claims, and was performed by W. L. Wilson, A. K. Wilson, Jr., and Skyline Labs, Inc., at the instance and expense of Idaho Mining Corporation, the owner of said claims. Said work was performed between September 1, 1970 and August 25, 1971.

Such work or improvements consisted of performing further geochemical surveys of said claims, which surveys were non-repetitive of previous work. This work benefited each of said claims. A report giving the basic findings of such survey is attached as Exhibit A hereto.

Dated this 26th day of August, 1971.

W. L. Wilson

W. L. Wilson, President

REPORT ON GEOCHEMICAL SURVEY, W-1, 2,
3, 4, 5, 7, 8, 12, 13 and 17 CLAIMS

A geochemical survey of the W-1 to W-5, W-7, W-8, W-12, W-13 and W-17 claims was conducted, starting in September 1969, and continuing through August 25, 1970. Soil samples were taken from the claims on 100-foot spacing, along east-west traverses 500 to 750 feet apart. The samples were dried and screened to -80 mesh, and the -80m fraction was analyzed for mercury and Heavy Metals (dithizone method). For the year 1970-71, additional soil samples were taken and analyzed to further delimit the anomalous zones.

In addition, rock chip samples were taken from outcrops on the claims and were analyzed for gold, silver, arsenic and mercury to attempt to correlate the results with the soil sample survey. The work was done by W. L. Wilson, A. K. Wilson, Jr., and Skyline Labs, Inc.

The basic findings from such surveys were:

1. The mercury anomalies on the W-1, W-2, W-5, W-7 and W-8 claims were better defined.
2. The zone, anomalous in Heavy Metals which generally follows the Hamburg dolomite outcrop on the W-2 and W-7 claims and on the W-3 and W-4 claims was further delimited.
3. A good positive correlation exists between the soil sampling and the rock chip sampling:
 - a. Content of mercury in soils and mercury in rocks in a given area show a strong positive correlation.
 - b. The areas which are anomalous for mercury and arsenic also generally contain anomalous amounts of gold.

The writer, W. L. Wilson, who supervised the above survey, has been Exploration Manager for Idaho Mining Corporation for 12 years, and previous to that was employed in the mining and mineral exploration business for 6 years.

Dated August 26, 1971.
