

AFFIDAVIT OF ANNUAL ASSESSMENT WORK FOR
UNPATENTED MINING CLAIMS

STATE OF COLORADO)
) ss.
COUNTY OF MESA)

TO WHOM IT MAY CONCERN:

Please take notice that W. L. Wilson, being first duly sworn, says that there was expended more than \$5,000.00 in labor and improvements, as the annual assessment work for the year ending September 1, 1971, on the following contiguous unpatented lode mining claims:

<u>Claim Name</u>	<u>Book</u>	<u>Page</u>
F-1	34 O.R.	528
F-2	34 O.R.	508-509

F-193	35 O.R.	314

all situate in the Eureka Mining District, Eureka County, Nevada, and owned by Idaho Mining Corporation, P. O. Box 2183, Grand Junction, Colorado 81501. Said work was done for the purpose of holding said claims, and was performed by personnel of Idaho Mining Corporation and Skyline Labs, Inc. at the instance and expense of Idaho Mining Corporation, the owner of said claims. Said work was performed during the period September 1, 1970 to August 24, 1971.

Such work or improvements consisted of a geochemical survey of said claims. This work benefited each of said claims. A report giving the basic findings of such survey is attached as Exhibit A hereto.

Dated this 26th day of August, 1971.

W. L. Wilson

REPORT ON GEOCHEMICAL SURVEY, F-1 to F-34,
F-97, F-98, F-102, F-104, F-106, F-108,
F-110, F-112, F-114, F-120, F-122, F-124,
F-126, F-128, F-130 and F-138 CLAIMS

A geochemical survey of the above listed unpatented mining claims was conducted, starting in September 1970 and continuing through August 25, 1971. The following work was done:

1. Soil sampling program--consisting of taking soil samples at 100' intervals, along the side lines of the claims. The samples were dried and screened and the -80m fraction was analyzed for mercury and for Total Heavy Metals (dithizone method). Results were as follows:

a. Mercury--a generally low background was found. Anomalous areas found were as follows:

- (1) Near the side center between the F-1 and F-97 claims.
- (2) On claims 26, 126, 28 and 128.
- (3) On the east portion of Claims F-31 and F-33, and on the west portion of Claims F-32 and F-34.

b. Heavy Metals--generally only low values were found, with a few single-station high values.

2. Rock sampling program--consisting of taking rock chip samples from outcrops, principally in areas which were anomalous for mercury delineated by the soil sampling program, and in the area of the older mines and prospects on the claims. These were analyzed for gold, silver, mercury and arsenic. Results are as follows:

a. Gold--Anomalous values were found at the following locations, which generally correlate very well with the mercury anomalies in the soil samples:

- (1) Near the side center of the F-1 and F-97 claims.
- (2) On the east portion of claims F-31 and F-33, and on the west portion of Claims F-32 and F-34.
- (3) On the F-14, F-16 and F-22 claims.

b. Silver--The only area which appears to have anomalous values for silver was on the F-14, F-16, F-20 and F-22.

c. Arsenic--Anomalous values in arsenic were found at the following locations, which generally correlate very well with the mercury in soils, mercury in rocks, and gold in rocks.

- (1) Near the side center of the F-1 and F-97 claims.
- (2) On the east portion of claims F-31 and F-33, and on the west portion of claims F-32 and F-34.

(3) On the F-26, F-125, F-28 and F-128 claims.

(4) Coincident with the silver anomaly on the F-14, F-16, F-18, F-20 and F-22 claims.

d. Mercury--Anomalous values were found at the same locations as were anomalous for arsenic listed as (1) to (4) above, and in addition four samples on the west end of claim F-118 were anomalous.

3. Rock chips from drill holes--consisting of analyzing drill hole samples in 10' intervals from rotary cuttings for gold, silver, arsenic and mercury. These results generally correlated very well with the values of the elements found in outcrop, and the mercury found in the soil samples.

This survey was non-repetitive of any previous known work, and did further the exploration and development of each claim in said group.

The writer, W. L. Wilson, who supervised the above survey, has been the Exploration Manager for Idaho Mining Corporation for 12 years, and previous to that was employed in the mining and mineral exploration business for 6 years.

Dated August 25, 1971.

W. L. Wilson
