SEALED
AFFIDAVIT

ATTACHMENT

Direction of the survey lines was approximately along the lines of the primary magnetic field at right angles to the station used. Line Spacing across the properties did not exceed 400 feet. Station Readings were taken at intervals not exceeding 100 feet.

Basic findings of the survey indicate that faults and shear zones do give sharp crossovers due to their conductivity factor and can be traced in areas of moderate cover.

Work was performed by and/or under the direction of:

M. C. Godbe, III
721 First Security Bldg.
Salt Lake City, Utah

- President and General Manager of East Utah Mining Company.
