PROOF-OF-PERFORMANCE-AND-COMPLETION-OF-ANNUAL ASSESSMENT WORK

STATE OF	
County of Curekar	. 173
The undersigned, in whose behalf the following described work was performed or im	-
provements made, certifies that at least	r
the following labor expended or improvements made having a value thereof, consisting of	1
a non-sepitive quochemical survey on the ensure hay	-\
of BC #1, the western portion of BC # 2, and the northern	- \
edge of RC # 3. le report on the findings of this gencheme	
survey is attached to this sheet.	1000
	_
were performed and made upon and for the benefit of the following contiguous	-
unpatented mining claims: RC#/ PC#2 RC#3 RC#4	_
NMC # 2/6958 thru 2/6961	_
	_
situated in the Secret Carryon Mining District of the Country of Custon	_,
State of Nevada, during the year ending 12:00 Noon, September 1, 19 £2.	
The work described above was performed on 6/5/82 Hum 8/1/82	_
by TRV Capton sim persons, Corporation or Contractor who Performed the Work or made the Improvements.)	
Such expenditure was made by or at the expense of	
TRV Exploration (Munda) Inc.	_
owner(s) of said claim(s) for the purpose of holding said claim(s).	
Recorder's Stamp (6) Ignature of Person Certifying the Above)	
(Signature of Witness)	
(Signature of Witness)	

Proof of Performance and Completion of Annual Americament Work must be Recorded within 60 days after Completion of work and must be subscribed to by Two Competent Witnesses. BOOK | 0 4 PAGE 2 4 5

REPORT ON GEOCHEMICAL SURVEY RC #1, RC #2, and RC #3

A geochemical survey of the above listed unpatented lode mining claim was conducted, starting in June 1982 and ending in August 1982.

The work consisted of a rock chip sampling program along a 1000 foot base line. Samples were taken on 150 foot spacings along as east-west traverse with rows 300 feet apart. Additional rock chip samples were taken across a 100 square foot grid at 50 foot intervals in the distinct anomalous areas determined by the initial survey. All samples were sent to Hunter Laboratory in Reno, Nevada to be pulverized and assayed for gold and silver (by fire assay) and lead and zine (by atomic absorption).

The basic findings of this survey were:

- 1. Gold anomalous values were found near the north central portion of the RC #1 claim, the northwest portion of the RC #2 claim, and the central part of the RC #3 claim.
- 2. Lead anomalous values were found near the central portion of the RC #3 claim.
- 3. Zinc anomalous values were found near the central portion of the RC #3 claim.

This survey was non-repetitive of any previously known work, and did benefit the exploration and development of each claim in said group.

The above waor was supervised and performed by Anne E. Pate and Robert G. Pate, qualified experts in the field of mining and mineral exploration, with 7 years experience each.

Dated August 16, 1982
