

AFFIDAVIT OF PERFORMANCE OF
LABOR ON LODE MINING CLAIMSGEOCHEMICAL SURVEY REPORTSTATE OF NEVADA
COUNTY OF EUREKA

Before me, the subscribed, personally appeared Kenneth D. Snyder for NL Industries, Inc./NL Baroid who being duly sworn, says at least TWO HUNDRED DOLLARS (\$200.00) worth of work or improvements were performed or made upon the following described lode mining claims:

| <u>Claim Name</u> | <u>Date Located</u> | <u>Book</u> | <u>Page</u> | <u>BLM Serial Number</u> |
|-------------------|---------------------|-------------|-------------|--------------------------|
| CC #1 | July 30, 1980 | 85 | 37 | NMC-164119 |
| CC #2 | July 30, 1980 | 85 | 38 | NMC-164120 |

Map File Number 75417

all being lode mining claims located in the "unknown" Mining District, County of Eureka, State of Nevada (Sec. 32 and 33, T23N, R50E) during assessment year ending September 1, 1983 that such expenditure was made by NL Industries, Inc., a New Jersey corporation acting by and through its NL Baroid Division, P.O. Box 1675, Houston, Texas, 77251, owner of said claims for the purpose of holding said claims.

Said work consisted of a geochemical survey permitted by Federal Statutes 30 U.S.C. 28.1; 30 U.S.C. 28.2; and 43 C.F.R. S3851.2 and was performed during the period June 22, 1983 to July 15, 1983.

GEOCHEMICAL SURVEY

The survey consisted of geochemical soil sampling along lines of traverses located of each mining claim. Soil samples were collected on five (5) traverse lines, 1800 feet in length, positioned at a distance of 375 feet from each other. A total of twenty-four (24) soil samples were collected at a constant depth of six (6) inches on 300 foot intervals. Collected samples were analyzed for gold, arsenic and barium utilizing accepted analytical techniques.

The locations and lengths of the five survey traverse lines are as follows:

- Traverse 1: Starting 300 feet east of the northeast corner of the CC #2 lode claim (750 feet north and 600 feet east of the Location Monument for CC #2), the traverse extends 1800 feet in a western direction, bearing east-west.
- Traverse 2: Starting 375 feet south and 300 feet east of the northeast corner of the CC #2 lode claim (375 feet north and 600 feet east of the Location Monument for CC #2), the traverse extends 1800 feet in a western direction, bearing east-west.
- Traverse 3: Starting 300 feet east of the east side center of the CC #2 lode claim (600 feet east of the Location Monument for CC #2), the traverse extends 1800 feet in a western direction, bearing east-west.
- Traverse 4: Starting 375 feet north and 300 feet east of the southeast corner of the CC #2 lode claim (375 feet south and 600 feet east of the Location Monument for CC #2), the traverse extends 1800 feet in a western direction, bearing east-west.

Traverse 5: Starting 300 feet east of the southeast corner of the CC #2 lode claim (750 feet south and 600 feet east of the Location Monument for CC #2), the traverse extends 1800 feet in a western direction, bearing east-west.

Results of the sample analysis identify an area with moderately high values for the elements analyzed. This anomalous area correlates with the existing mineralized structure. The survey indicates that an apparent correlation exists between background values for some of the elements analyzed and rock types occurring in the sampled area. Further interpretation and examination will be required to explain other determined anomalous areas.

The survey was performed by qualified personnel employed by NL Industries, Inc./NL Baroid, P.O. Box 2150, Elko, Nevada, 89801, and all geochemical analyses were performed by Skyline Labs, Inc., 12090 West 50th Place, Wheatridge, Colorado, 80033 on behalf of NL Industries, Inc. All exploration and improvements were made for the purpose of actively developing and holding said claims.

The geochemical survey team employed by NL Industries, Inc. consisted of two geochemical samplers/geologists and was directed by the senior geologist. An expenditure of over Two Hundred Dollars (\$403.38) was paid by NL Industries, Inc. to Skyline Labs, Inc. for the geochemical analyses. A report of the survey is on file with NL Industries, Inc./NL Baroid.

Names, Addresses, and Professional Backgrounds:

Kenneth D. Snyder - Senior Geologist, NL Industries, Inc./NL Baroid. Master of Science - Geology, University of Idaho, 1973. Eleven (11) years experience in International exploration.

Terry K. Koehn - Geochemical Sampler/Geologist, NL Industries, Inc./NL Baroid. Bachelor of Science - Geology, University of Wisconsin, 1978. Five (5) years experience in Western United States exploration.

Joseph E. Wyatt - Geochemical Sampler/Geologist, NL Industries, Inc./NL Baroid. Bachelor of Science - Geology, University of Idaho, 1980. Three (3) years experience in Western United States exploration.

Gordon H. VanSickle - Geochemist, Vice President and Laboratory Manager, Skyline Labs, Inc.
