104594

AFFIDAVIT OF PERFORMANCE OF LABOR

STATE OF UTAH)
) ss.:
COUNTY OF SALT LAKE)

Before me, the subscribed, personally appeared Ronald Willden, whose address is 8750 Kings Hill Drive, Salt Lake City, Utah 84121, who being duly sworn, stated that at least SIXTEEN THOUSAND EIGHT HUNDRED DOLLARS ($16,800) worth of geochemical and geological surveying work was performed upon or for the benefit of all of the following described group of 168 contiguous lode mining claims situated in sections 1, 2, 11, 12, 13, 14, 23, and 24, Township 27 N., Range 52 E., and sections 7, 18, 19, 20, 29, and 30, Township 27 N., Range 53 E., MDB&M, Eureka County, Nevada :

BR Numbers 3 through 20, 22, 24, 25A through 42A, 43, 45, 47, 49A, 52A, 54A through 94A, 99A through 120A, 127 through 140, 143 through 176, and 259 through 272, more particularly described in Exhibit A, attached hereto and made a part hereof.

He further stated that such expenditure was made by John L. Carroll on behalf of Anaconda Minerals Company, owner of record of said claims, for the purpose of holding said claims for the assessment year that ends at noon September 1, 1986; that the foregoing work was performed during the period June 23 through August 23, 1986; that he is the duly authorized agent of John L. Carroll, whose address is 515 Madison Ave., 32nd Floor, New York, N. Y. 10022; and that attached to this Affidavit is a copy of the Report of such work, as required by Title 30, United States Code, Section 28-1.

Signature of affiant Ronald Willden
Ronald Willden

Subscribed and sworn to before me this 26th day of August, 1986.

SEAL Affixed

Notary Public

My commission expires April 23 1988.

EXHIBIT A

The following described unpatented lode mining claims are located in sections 1, 2, 11, 12, 13, 14, 23, and 24, Township 27 N., Range 52 E., MDB&M, in Eureka County, State of Nevada, and the location notices are filed in the Recorder's Office of said County and with the Nevada State Office of the U. S. Bureau of Land Management.

SUMMARY REPORT

August 26, 1986

This detailed report is filed in compliance with the requirements of Title 30, United States Code, Section 28-1, for a group of 168 contiguous lode mining claims known as the BR claims numbers 3 through 20, 22, 24, 25A through 42A,, 43, 45, 47, 49A, 52A, 54A through 94A, 99A through 120A, 127 through 140, 143 through 176, and 259 through 272, situated as shown on the Plan Map attached hereto and made a part hereof. These claims are recorded in the office of the Eureka County Recorder and with the U. S. Bureau of Land Management as shown on the Exhibit to the Affidavit to which this Summary Report is appended.

The assessment work consisted of a geological survey of the entire claim block and a geochemical survey of the portions of the claim block shown by the grid lines on the Plan Map. The geological surveying was done by Don H. Adair, a consulting geologist of 722 Vista Ave., Boise, Idaho, and by the undersigned. The geochemical surveying was done by a crew of technicians under the direct supervision of the undersigned who is qualified to conduct such surveys by virtue of BS and MS degrees in Mineralogy, a PhD degree in geology, and more than 34 years experience in geologic surveying, mineral property evaluation, and supervision of such surveys. The cost of this surveying program was in escess of $16,300.00.

The geologic surveying showed that the claim block is underlain by several distinctly different groups of rocks, most of which are in fault contact with other groups. The oldest rocks are thought to be a sequence of siliceous shale and dark bedded chert tentatively correlated with the Vinini Formation, which trends diagonally through the southwest part of the claim block. These rocks are faulted against a thick sequence of dolomites by a fault that closely parallels the base line of the Canyon geochemical grid. The dolomites have been assigned to the Nevada Formation of Devonian age, whichare also exposed along an upland ridge near the western extremities of the survey lines of the County Line geochemical grid. In this area the Nevada Formation is in fault contact with a sequence of light brown siliceous shale, chert, and sandstone of probable Devonian to Mississippian age.

The geochemical samples consisted of mixed B-C soils collected from shallow pits dug with a grub hoe. These samples were submitted to Rocky Mountain Geochemical Corp., Midvale, Utah, for analysis for gold, arsenic, antimony, and mercury. The results showed that very few samples contained detectable gold, but the other three elements were present in anomalous amounts at several places on the Canyon grid and at a number of places on the County Line grid where the survey lines crossed faults. The two grids display distinctly different geochemical characteristics. Arsenic was not detected in nearly one third of the samples from the Canyon grid whereas it was not found in fewer than 5% of the samples from the County Line grid. A nearly reverse situation prevails with respect to antimony on the two grids. Approximately two thirds of the samples from the County Line grid contained no detectable antimony whereas in only about one third of the Canyon grid samples was antimony not detected. Mercury is much more abundant in the area covered by the Canyon grid than it is in the County Line grid area.

Detailed maps and technical data incorporating the results of this survey are in the possession of the undersigned, who maintains offices at 10 Oak St., Number 8, Midvale, Utah 84047.

Respectfully submitted,

Ronald Willden
