Report for 1989 Assessment Affidavit detailing a geochemical survey

Claims: CT 200 - CT 208

Date(s) of work: July 10, 1989

Section/T 35N, R 5E

This report details the geochemical survey undertaken as part of the development of the above claims on behalf of St. George Metals, Inc.. The attached map gives the location of the survey relative to the claim boundaries and location monuments.

All work was conducted per the specifications of James A. McGlasson, Vice President of Exploration, St. George Metals, Inc., M.S. Geology, of 7387 Flower St., Littleton CO 80123, with over 20 years experience in exploration geology.

Field work was conducted by Anthony G. Ruedi, B.S. Geology, of 188 S. Zinnia Way, Lakewood, CO 80228; over 15 years experience in exploration geology.

Analyses were performed by ADVOL GEOCHEMICAL METHODS, LTD. a division of CALEXCO, INC., 2200 West Berry Avenue, Suite 4, Littleton, CO 80120. ADVOL GEOCHEMICAL has been doing soil gas geochemistry using a mass spectrometer commercially since 1983 subsequent to prior research and development.

Field sampling procedures include collecting soil samples from a number of sites around the sample point to allow for a more representative sample and sampling undisturbed and stable soil.

In the laboratory the clay fraction of the soil is separated and heated to release adsorbed organic and inorganic molecules. The desorbed gasses are introduced into a quadrupole mass spectrometer for qualitative and quantitative analyses.

The results of this survey are attached as part of this report as is a map showing the sample points relative to claim boundaries and location monuments. Computer aided analysis of the relative abundance of some forty specific masses per sample are used for interpretation of the data based on depletion or enrichment of certain organic and inorganic compounds.
