Summary Report

This report is filed in compliance with the requirements of Title 30, United States Code, Section 28-1 for the X claim group, a total of 45 contiguous, unpatented lode mining claims, situated in Eureka County, Nevada and described in the attached Exhibit "A".

The work consisted of radiometric, magnetic and VLF detailed geophysical investigations. These studies were undertaken in order to evaluate the discovery of valuable mineral deposits; correlate anomalies with drill holes, self potential geophysics and sampling previously completed on the claims; and to locate future drill holes in areas having favorable composite geophysical signatures interpreted as fault intersections. The work was performed during March and April, 1990 by Tony M. Preslar of P.O. Box 38310, Colorado Springs, Colorado 80937, a geophysicist of 16 years exploration experience with a degree from New Mexico State University, Las Cruces, New Mexico. The cost of the geophysical investigations exceeded \$4,500.00 and was paid by W. P. Nash, owner of the mining claims.

These investigations were conducted using proprietary radiometric, magnetic and VLF geophysical exploration methods. Discrete station radiometric, magnetic and VLF measurements were made at all claim corners, side centers, location monuments, midpoints between corners and side centers along corner and side center lines oriented in a north/south direction, and at various other points of interest within the X claim group. A total of 576 discrete stations were occupied. In addition, a total of 17 detailed profiles were conducted. The locations of all detailed profiles were selected to coincide with anomalous areas resolved by the preliminary discrete station radiometric, magnetic and VLF measurements as well as the previous self potential measurements. The results of these studies confirmed the valuable mineral potential of the claim group, supporting the previous interpretation of two NNW-SSE trending mineralized faults intersected by a prominent WSW-ENE trending mineralized fault. Fault intersections were selected as future drill targets.

All technical work from the above is in the possession of W. P. Nash, owner of the mining claims.

Completion Date: May 10, 1990
