All technical work and results are in the possession of Newmont Exploration Limited, the owner or lessor of the subject claims.

The soil samples were sieved to -80 mesh and analyzed for 15 elements by Geochemical Services, Inc. The elements analyzed for and their range of values are as follows: Au (>5 - 78 ppb), Ag (.05 - 2.5 ppm), As (3.7 - 61 ppm), Bi (.08 - .72 ppm), Cd (.07 - 24 ppm), Hg (<.02 - 1.0 ppm), Sb (.63 - 20 ppm), Se (<.25 - 9.1 ppm), Te (<.05 - .36 ppm), Cu (11 - 218 ppm), Mo (.70 - 38 ppm), Pb (5.6 - 35 ppm), Zn (37 - 1965 ppm), Ga (0.5 - 7.1 ppm), Tl (>.49 - 1.3 ppm).

The basic results are the individual Bouguer gravity readings ranged from -199 milligals to -176 milligals. Gravity readings become gradually lower to the northeast.

The cost of the work exceeded \$21,159.00 and was conducted at the expense of Newmont Exploration Limited.

The geological and geochemical work consisted of soil sample collections at gravity stations spaced approximately one kilometer apart for 186 stations.

The work consisted of a helicopter-supported gravity/soil survey to evaluate the potential of the claims for discovery of valuable mineral deposits thereon and to assist in planning further exploration, development and extraction of minerals. The work was performed under the supervision of John E. Zimmerman, Elko, Nevada, a professional geologist employed by Newmont Exploration Limited, P.O. Box 669, Carlin, Nevada 89822. The work was completed by the following individuals who are geologists/geochemists and employed by Newmont Exploration Limited during the work period.
