COR 45	883992	

The work consisted of continued geological mapping along claim end lines, especially targeting the Jasperoid exposures on the westerly portion of the claim group, also targeting the thin bedded, possibly Webb Formation siltstones mostly dipping 10-15 degrees easterly, reviewing geochemical data for better determination of drilling targets, also making minor improvements to existing access roads, removing boulders and rocks from creek crossings. About 12 days were spent on such work intermittently between October 25, 2009 to August 28, 2010. Such work was performed by and under the direction of Peter W. Laczay P. Eng. of Ontario.

SUBSCRIBED and sworn to before me on this 1th Day of October, 2010.
